

Hi Mr. Gerken, President & CEO of American Municipal Power,

I believe that climate change is the most pressing environmental and human rights issue facing the world today, and am deeply concerned about American Municipal Power's proposed coal power plant in Meigs County, Ohio. I know that coal-fired power plants are the single largest contributor to the problem, and am taking time today to let you know my opposition to the AMPGS proposal.

The federal EPA has decided to regulate greenhouse gases, the AMPGS has recently been found through independent assessment to be significantly more expensive than originally proposed, and the AMPGS is a serious justice issue as it forms the cornerstone of the highest concentration of coal plants in the country, all while other states have rejected proposed coal plants because of concerns about climate change and pending federal regulation.

**I ask of you, Mr. Gerken, to do your part.
Reconsider the AMPGS project, and fund clean, renewable energy.**

Sincerely,

Hi Mr. Gerken, President & CEO of American Municipal Power,

I believe that climate change is the most pressing environmental and human rights issue facing the world today, and am deeply concerned about American Municipal Power's proposed coal power plant in Meigs County, Ohio. I know that coal-fired power plants are the single largest contributor to the problem, and am taking time today to let you know my opposition to the AMPGS proposal.

The federal EPA has decided to regulate greenhouse gases, the AMPGS has recently been found through independent assessment to be significantly more expensive than originally proposed, and the AMPGS is a serious justice issue as it forms the cornerstone of the highest concentration of coal plants in the country, all while other states have rejected proposed coal plants because of concerns about climate change and pending federal regulation.

**I ask of you, Mr. Gerken, to do your part.
